PROTOCOLS

-for-

TAPEWORM

DISEASE

Compiled by BestZapper.com from the works of
Dr. Hulda Regehr Clark, PhD, ND

INTRODUCTION

Dr. Hulda Clark's Research focused on Parasites, Toxicity, and Cleansing. Her recommendations, remedies and books were constantly being updated, as her work evolved. Some of her work was never officially included in her books.

Tapeworms were addressed separately from "parasites" as Tapeworm Disease. They were more resistant, and posed a serious challenge. Tapeworm Disease was an addition to her Standard Parasite Cleanse – Cloves, Wormwood and Black Walnut plus Zapping protocol.

Following is our summary of the 2 main Tapeworm Protocols for Tapeworm Disease, with references following. The first Recipe was never written in her books, though it was delivered to us personally. The second Recipe was addressed in her book "The Cure for HIV and AIDS", and is included here along with other quotes of interest.

–The Best Zapper Team

TAPEWORM ELIMINATION RECIPE #1

From Dr. Hulda Clark, PhD, ND
(from ZapTimes Archives #30, June 19, 2008)

According to Dr. Clark, this was the only thing that she has found that could destroy the scolex (egg-laying head) of a tapeworm completely, along with the rest of its stages. This recipe was passed on to us personally by Dr. Clark.

To get started, you need 9 essential oils. You must use essential oils that are safe for the human body. Get a small bottle of each of these:

Allspice	Anise	Caraway
Coriander	Fennel	Juniper
Nutmeg	Sage	Thyme

-Take 2 drops of each oil 2 times per day for 2 days on an empty stomach. People weighing over 200 lbs (90kg) can use 3 drops of each oil 3 times per day for 5 days.

Place the drops in a large vegecap (OO size) and swallow with water. You can mix several kinds of drops in one vegecap.

That is all there is to it! This recipe is another tribute to the healing power of herbs.

Note: Keep using the AutoZap 5 Zapper during this process; it is essential in aiding your body to do its best job in eliminating parasites.

TAPEWORM MOP-UP PROGRAM #2

(From The Cure for HIV & AIDS, Copyright 1993
by Dr. Hulda Regehr Clark, PhD, ND)

Here is the Mop-Up Program for both tapeworm larvae and sheltered Ascaris eggs:

- Ozonated olive oil, 1 Tbsp taken morning and night
- L-Cysteine, 500Mg, 2 capsules 3 times a day.

You can easily make your own ozonated oil. Purchase an ozonator and a small bottle of olive oil. Treat the oil first to remove traces of PCB and benzene.

Pour a glass of olive oil. Attach an aerator to the end of your ozonator hose and drop it to the bottom of the glass. Turn the ozonator on before dropping the hose. Ozonate for 30 minutes. When done pour it in one tablespoon amounts into plastic relish cups with lids. Store in freezer. Oil melts quickly when needed. Or do your ozonating in a jar so you can spoon out the frozen oil later. If you merely refrigerate it, ozonate it again after five days to restore potency. Would other oils work? Possibly, I have not researched them, though, so it is wiser to stick with olive oil.

Ozonated oil give you no noticeable side effects, but it should not be taken more than necessary. One could expect the ozone to jump across from oil molecules to your fat molecules, aging them too soon. Fortunately, the dose is small and may be directed at the intruders before it is directed at you.

The cysteine should be the L- variety, not D-cysteine, which is unnatural. It may be cysteine hydrochloride or simply free cysteine.

Taking this supplement in large doses can give you side effects, perhaps due to its penetrating antiparasite property. If you have serious side effects, reduce the dosage. Even if you reduce the dosage, do not take it longer than 3 weeks. Most persons get no side effects. But for more parasitized you are, the more side effects you could have: fatigue, loss of appetite, nausea. Remember that animals that are being deparasitized have similar symptoms. I have not yet found a way to counteract these symptoms, so do what helps you most. It may be more rest, or taking vitamin C.

Take vitamin E, 400 IU, once daily. Vitamin E will counteract the over-oxidation produced temporarily by the ozonated oil. Take it two hours or more after the ozonated oil to make sure there is no loss of the oil's potency.

Cysteine has other important benefits for you. It counteracts the radiation we all get from living on this planet, called "background radiation". This might even explain why supplementing animals with

cysteine had the effect of lengthening their lives substantially. Cysteine is a heavy metal detoxifier, perhaps through the formation of glutathione. It deserves a permanent place on your supplement list.

Nevertheless, supplementing with cysteine should not be overdone. After taking 6 capsules daily for 2 weeks go off it completely for one week.

If your symptoms return or never completely left, you can assume that some eggs escaped or you still have a particularly resistant tapeworm stage. You may safely double the dosage of ozonated oil. Take 2Tbs twice a day for three days only. No Ascaris or tapeworm stage can escape this high-dose treatment. Only reinfection can give them back to you. Although there are no side effects, do not take this dosage on a daily basis. But you may add it to your weekly maintenance program (including vitamin E)

	Ozonated Olive Oil	L-cysteine, 500mg each	Vitamin E, 400 IU
Two weeks, daily	1 Tbsp AM, 1 Tbsp PM	2 capsules, 3 times daily	Once daily, 2 hours or more after oil
One week off			
Two weeks (if necessary)	1 Tbsp AM, 1 Tbsp PM	2 capsules, 3 times daily	Once daily, 2 hours or more after oil
One week off			
Continue this schedule until well			

TAPEWORM DISEASE

QUOTES FROM The Cure for HIV and AIDS,
by Dr. Hulda Regehr Clark,
updated 2006, p. 66-74, copyright 1993)

Tapeworm Disease

We all have tapeworm stages in our bodies, probably going back to childhood when we ate dirt. It is not normal for these stages to hatch and develop further. Their purpose is to stay dormant. And perhaps they do little harm this way.

But i have found that all HIV/AIDS sufferers have “tapeworm disease.” The stages are hatching. This spews the tiny larvae and cysts, plus unfertilized eggs and their bacteria all over the body, making you feel sick. Perhaps the large amounts of solvents accumulated in the body forces them to hatch; perhaps the lowered immunity allows them to hatch. The Syncrometer usually detects scolices (heads) and eggs in the most vital organs: the thymus, spleen, bone marrow, brain and liver.

Coenzyme Q10 is an effective treatment. But it takes a very large amount, 3000 mg. In a single dose.

We have since discovered that coenzyme Q10 also helps to detoxify the more difficult azo dyes, Fast Garnet and Fast Green. Here, too, a large dose is needed. It may be very costly but you are getting extra value from coenzyme Q10. Large doses are more cost effective than small doses. If you can afford it, take a large dose (about 1 tsp. Powder) daily. If not, take the large dose once a week.

If you do not get well after herbal parasite program, coenzyme Q10, and the zapper treatment, you can assume you have either leftover tapeworm stages or survivor Ascaris eggs.

Ascaris infests animals and humans from pole to pole of the planet. It is safe to say that all dogs and cats have it and all humans have it from time to time. Domestic animals and humans each have their own variety of Ascaris; yet can host the other varieties, too. Horses have Ascaris megalocephala, Pigs have Ascaris suum. The human variety Ascaris lumbricoides. Ascaris does not attach itself to you, it hardly even moves. It simply lies still in your organs absorbing your nutrients and eventually filling up with eggs. Often they are pink with your Vitamin B12.

When you kill Ascaris worms by zapping or with the herbal recipe, they are mortally wounded. They are dying, but the eggs inside them are not. They were sheltered. Within a day these eggs begn to leave the dying worm. Soon hordes of eggs are dispersing in your body again!

And in another 24 hours they are beginning to hatch into larvae. You can detect this as it happens with a Syncrometer and test-slides of eggs, larvae, and adults.

Asceris Everywhere

Of course, you will be zapping and taking the herbal parasite killers. But again, these do not penetrate the Ascaris body, to kill what is inside. It could take weeks for the dead Ascaris to be totally disintegrated so no more eggs are being sheltered within.

Surely, a few Ascaris eggs still escaping into your body could not do much harm since the overall problem has been greatly reduced! This is not so. The eggs may even do more harm than the worms. Ascaris eggs bring three very important pathogens that spread throughout your body: Rhizobium leguminosarum, Mycobacterium avium/intracellulare, and the common cold virus, Adenovirus. A flood of these is responsible for your night sweats! As soon as the last Ascaris egg is gone, these pathogens are gone, too, and the following night becomes free of sweating. If your night sweats come back, you know Ascaris eggs are present again. And in 24 hours, unless you kill them, they will hatch into larvae and start the whole cycle over again. "Shingles" comes from Ascaris lumbricoides as well as Mumps.

It takes about 3 weeks for large parasites like Ascaris and tapeworm larvae to disintegrate completely and be cleared from your tissues. If eggs or scolices are continually released during this time, the cycle of infection cannot be broken. Fortunately the same two things that can penetrate tapeworm larvae can also penetrate Ascaris worms and mot up after them, whether dead or alive!

OTHER TAPEWORM REFERENCES

(in older versions of The Cure for HIV and AIDS
by Dr. Hulda Regehr Clark, PhD, ND)

DIY OZONATED OLIVE OIL

Buy a smallest ozonator to make your own ozonated oil. You can easily make your own ozonated oil. Purchase an ozonator and a small bottle of olive oil. Pour off an inch or so. Attach an aerator to the end of your ozonator hose and drop it to the bottom of the olive oil bottle. Choose a ceramic or wood aerator, available at any pet store. The plastic varieties release benzene! The bubbles may make the oil flow over the top. In this case, pour more of it off. Turn the ozonator on before dropping the hose in the bottle. Ozonate for 20 minutes or longer. When done, cap the bottle and store in the freezer until you are ready to use it. It melts quickly when needed. After 5 days of use, ozonate again to restore potency. Would other oils work? Possibly. I have not researched them, though since they cannot be trusted to be free of benzene pollution.

SUPPLEMENT RECOMMENDATION

Dr. Clark wrote this in an early version of her Book Cure for HIV and AIDS:

“There is another essential herbal product you will need to get completely well. I have found all HIV/AIDS sufferers also have “tapeworm disease”. It is normal for us to have tapeworm stages in our bodies, probably going back to our childhood when we ate dirt. It is not normal for these stages to hatch in us. But they do hatch in HIV/AIDS sufferers because of the large amounts of solvents, especially benzene, in their bodes. Hatching tapeworm cysts spew unfertilized eggs plus bacteria and viruses all over the body, making you feel sick. To kill these emerging tapeworm stages you need RASCAL.
